

Chen is a github resource for doing corpus studies! This will be my main source of practical instruction, with plenty of coding examples for making a github repo suitable for analysing corpora. Chimoto (2022) is a text about using methodology usually used on large corpora for languages that are considered ‘low-resource’, meaning they have little documentation or available texts. The study focuses on Luhya, which is the macrolanguage that Tiriki is a part of, which is particularly helpful. Wynne (2005) is a guide by a linguist, for linguists, on how to make a corpus. I will likely need to read this entire textbook. This will be my main source of theoretical instruction, since the linguistics department no longer offers a corpus class.

Source for my data: a pre-existing collection of texts, gathered by Micheal JK Dierks, Micheal Marlo, and their students, and Kelvin Alulu, our language consultant. These texts are oral literature in Tiriki, which have been transcribed. There are approximately 300 texts as far as I know. There are also a few Tiriki recordings out on the internet, such as audio recordings of the Bible in Tiriki – however these recordings are very few and far between.

I found the bible recording here:

[Idakho-Isukha-Tiriki: Tiriki language](#)
